

Helping You Feel Your Best!

Nutrition Tips for People with Hepatitis C

Hepatitis C harms your liver. Your liver plays many important roles. It deals with everything you eat and drink. A healthy lifestyle can help you feel your best and help your body cope with the hepatitis C virus.

Healthy eating and moderate physical activity can:

- give your body the energy it needs to work well,
- boost your immune system,
- help your liver renew itself, and
- decrease some of the symptoms of your hepatitis C and the side effects of treatment, such as feeling tired and sick.

Eat well

- Choose a variety of foods from all four food groups of Canada's Food Guide.
- Get plenty of Vegetables & Fruit and Grain Products.
- Eat at least 2 servings from the Meat & Alternatives food group (such as meat, fish, poultry, eggs, peanut butter, and cooked legumes (e.g. dried beans, peas and lentils)).
- Focus on lower fat choices within each food group.
- Drink 6 to 8 glasses of fluids every day.
- Keep your energy level up by eating smaller meals and snacks more often.

Supplement carefully

- Use only herbal products that your health care provider has told you are safe.

- Do not take more than one multivitamin per day – and you may need one without iron. Talk to your health care provider about which vitamin and mineral supplements are best for you.

Take care

- Avoid alcohol.
- Enjoy light to moderate physical activity, such as walking, swimming, gardening and stretching.
- Build up slowly to 30 to 60 minutes of activity, at least 4 times a week.
- Avoid food poisoning by storing and preparing foods safely. Wash your hands often.
- Talk to your health care provider if depression affects your ability to eat well.

If you have complications...

- ...such as cirrhosis or fluid retention, you need to pay even more attention to nutrition.
- Get tailored advice from your doctor or dietitian.
 - Eat smaller meals every few hours. This may be easier for your body to handle and will help keep your energy level up.
 - You may need to limit your intake of salt if you have swelling of the abdomen (ascites) or legs (edema).
 - Try extra-strength liquid nutrition supplements, available from your local pharmacy. Some examples are: Boost Plus Calories®, Ensure Plus®, Resource Plus®.

Low-Cost Nutritious Choices

Eating well doesn't have to be expensive. Low-cost nutritious choices can be found in each food group:

- bread, rice, pasta, rolled oats
- carrots, potatoes, frozen vegetables, apples, in-season berries
- milk powder, plain milk or yogurt
- baked beans, eggs, dried beans, peas and lentils, canned fish, ground beef

How to Find a Registered Dietitian

- Visit www.dietitians.ca/find.
 - Call your local public health department, hospital or community health centre.
 - Call the Consulting Dietitians Network at 1-888-901-7776.
- Registered Dietitians can help you meet your nutrition needs by designing a personal meal plan.

You definitely should see a Registered Dietitian if you have:

- complications related to advanced liver disease, such as cirrhosis or fluid retention
- another medical condition, such as diabetes or HIV
- a problem with weight loss or weight gain
- diarrhea for more than 3 days
- trouble eating well
- diagnosis of fluid retention requiring a low salt diet
